# ITmanager.net

ITmanager.net is a mobile-first RMM software solution helping IT Departments and Teams Leverage their mobile devices and the Cloud to resolve IT issues ANYWHERE on DEMAND. Providing the benefits of decreasing costly server downtime and increasing client production thereby becoming more agile and responsive to company related IT network issues. This allows your IT Administrators on your team to be more responsive and productive wherever they are!

With an all-in-one monitoring and management dashboard ITmanager.net delivers the information you need and when you need it. This helps make your IT team more efficient plus reduces the load of repeated tasks so they can focus on more important IT processes. The power of the solutions is that it allows you to monitor the performance of your systems 24/7 and receive real-time notifications of IT systems on any device(phone, tablet, web browser) anywhere and resolve issues before your clients even know.

**Simple setup has you up and running in minutes.**

ITmanager.net's network scan will load up all the servers, machines and devices in your network. You select which ones to add to your dashboard and ITmanager.net will do the rest of the work. In minutes, you can be monitoring and managing servers and network devices across all your IT Systems from wherever you are.
